

# Competency Insight

Data driven hiring certainty for growing companies.

## How it works:

Competency Insight is a secure, cloud native platform hosted on our infrastructure and accessed through your web browser. With a simple ATS connection, we use [job specific competencies](#) and data science to filter out the noise and quickly show you top candidates.

## Ranking Module – for job applicants

Provides a quick and intuitive interface enabling job applicants to capture an inventory of their competencies.

Working in two dimensions to capture applicant's level of interest *in addition* to skill levels, SkillBank captures deeper insight straight from the source.

By integrating with your ATS, job applicants are invited and the results are returned to your hiring platform. If you don't use an ATS, you can invite people individually or in bulk via CSV.

## Insight Module – for talent acquisition professionals

The Insight Module provides your TA staff with deep insight to help them hire smarter and faster.

The Insight Module makes extensive use of our [Job Competency Signal™](#) to quickly stack rank cohorts of any size and drill down to get the detail you need to make confident hiring decisions.

## Free to get started

The Foundation Tier is currently free with sufficient content and access licenses to start without requiring support from your IT staff. Perfect for evaluation and sufficient for many small businesses.

[See what you get for free.](#)
